AD-MAT section

After 40 years of experience in the traditional and customized mat industry, Mat.en introduces the unit of the promotional products dedicated to the customized materials print.

Mat.en's goal in this project has always been to offer you the highest quality achieved through long and meticulous research to collaborate with the best suppliers, but also to give you the opportunity to choose from a wide range of options, offering you products with different features and functions able to perfectly adapt to your needs and requirements.

In-house we have state-of-the-art machines and the use of professional non-toxic inks allows us to give products strong and bright colors that ensure excellent durability in maximum safety.

Our techs work with digital cutter Zund G3, which through its innovative systems allows an extremely precise realization. The printing techniques we have been able to incorporate into Mat.en are many.

The sublimation printing has been studied and indicized through research and tests by our technicians, who have come to have enough experience today to be able to solve any request.

The UV printer has been programmed to be used on even the most difficult materials so it can always offer quality customization with saturated, full colors. Our ad hoc system allows the creation of a resin coating on the surface that makes the material significantly more durable and keeps the colors for a long time.

Years of studies have allowed Mat.en to be able to offer a wide range of products, from exhibition carpets, to temporary walkways to everyday accessories.

and much more...
